

Climate policy

NIBE Group wants to be a contributing factor in counteracting the global climate crisis and its effects. Our goal is therefore to be carbon dioxide neutral until the year 2050. This long-term goal is in line with our vision that our world-class sustainable energy solutions should contribute to a faster transition to a resource-efficient and fossil-free society. We work continuously to find more resource- and energy-efficient solutions and to minimize the negative climate impact of our production. We do this by focusing on the following goals:

Limitation of climate change and implementation of energy efficiency improvements

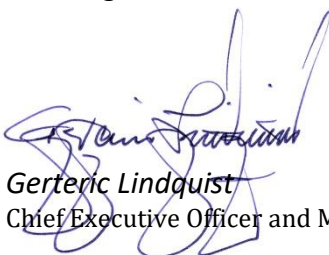

- Work to, in accordance with our set interim goals, continuously reduce emissions in our own operations in order to become carbon dioxide neutral by 2050.
- Work to make our own operations more energy efficient and reduce total energy use.
- Work to increase the proportion of self-produced renewable energy relative to the total amount of energy used.
- Work for our suppliers to minimize their climate impact by, for example, reducing their carbon footprint.
- Work to reduce the climate footprint of our products.
- Collaborate with external parties such as industry organizations and authorities regarding exchange of experience, technical development and collaborative projects regarding, for example, energy efficiency and climate change.

Climate adaptations

- Work with climate risk analyzes to map risks and opportunities for our operations and suppliers.
- Implement adaptation solutions in our operations to counteract identified climate risks.
- Collaborate with external parties such as industry organizations and authorities regarding exchange of experience, technical development and collaborative projects regarding, for example, climate risks and climate adaptations.

Transparency

- We must be transparent regarding our goals, results and activities to reduce our climate footprint. As part of this, we must continuously measure, review and report our greenhouse gas emissions in accordance with established international guidelines and laws.

Gerteric Lindquist
Chief Executive Officer and Managing Director
